Lap1 Login

Create JS script to be run in web browser ,

User will enter his Username , Password

If username = "admin" and password = "421$$"

Show him message "Welcome login success"

If he entered incorrect username or password

Tell him which data entered wrong

Lap2 Calc

Create JS script to be run in web browser ,

User will enter first number

Then enter an operation (sum,multi,subtract,division,moduls)

Then enter second number

Then do the operation and show the result to user

Bonus

Using lap2 add more features as following

User will be able to use the last result to do new operation on it

As example user enter 1 then sum then 3 then show 4 then sum then 5 then show 9 and so on

Note , you will need loop statements for repeating the process
