# Lap1

Create login page and validate user inputs on submit

User should enter email and enter password

The password should contain small , capital letters and numbers one of them at least and shouldn't be less than 8 characters

If the data not valid show him message to ask them to correct the error with more details about the issue

If the data is valid using javascript let the form to send the request

Lap2

Create Digital watch like the following with alarm option (you can use alert dialog box to alarm the user instead of sound)
